Easy Setup

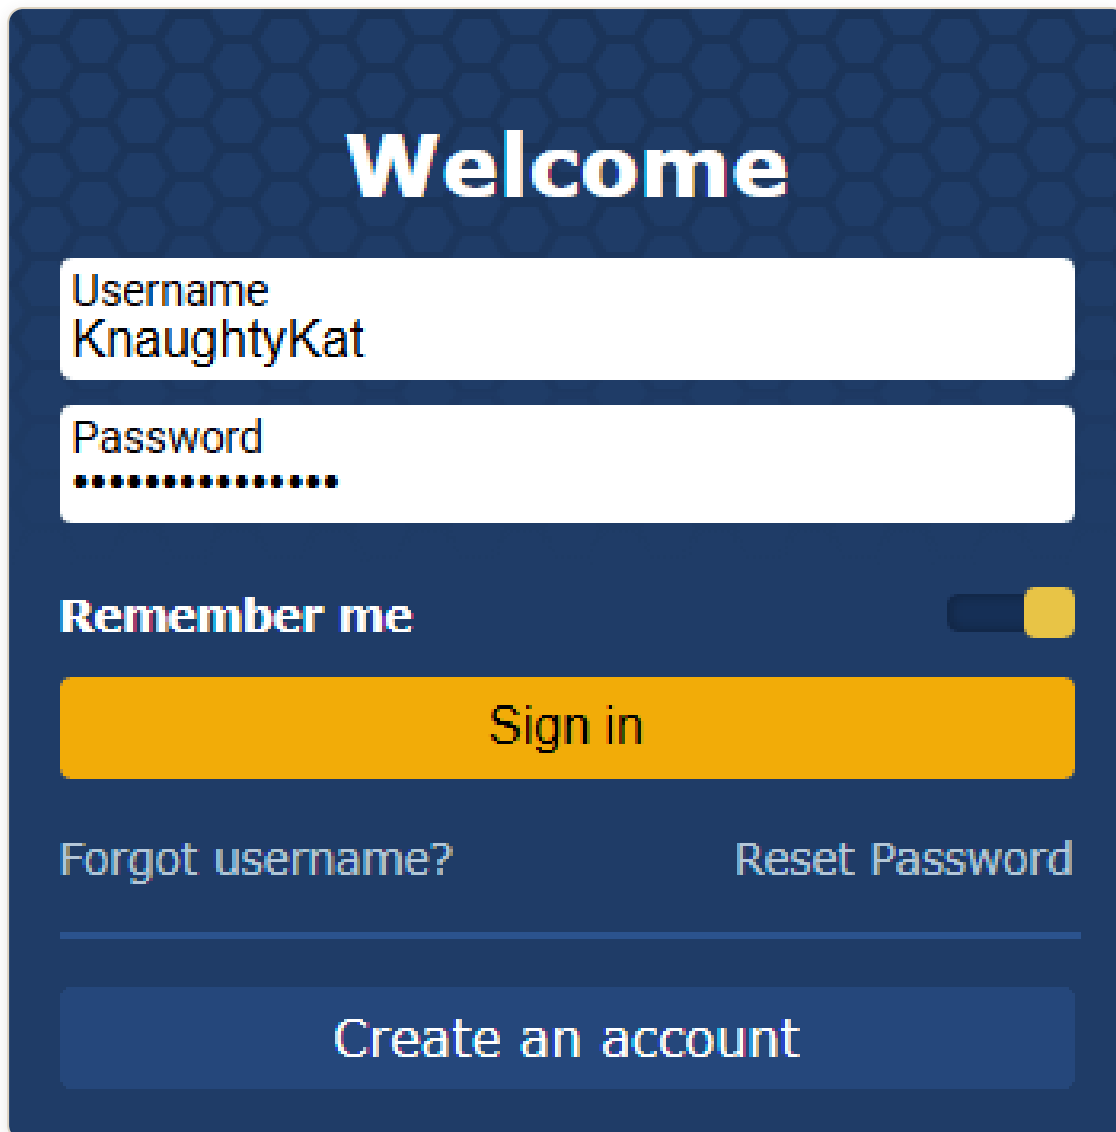

[Open this guide as a PDF ↗](#)

WHAT YOU'LL NEED

- An e621 account
- An API key (not your password)

STEP BY STEP

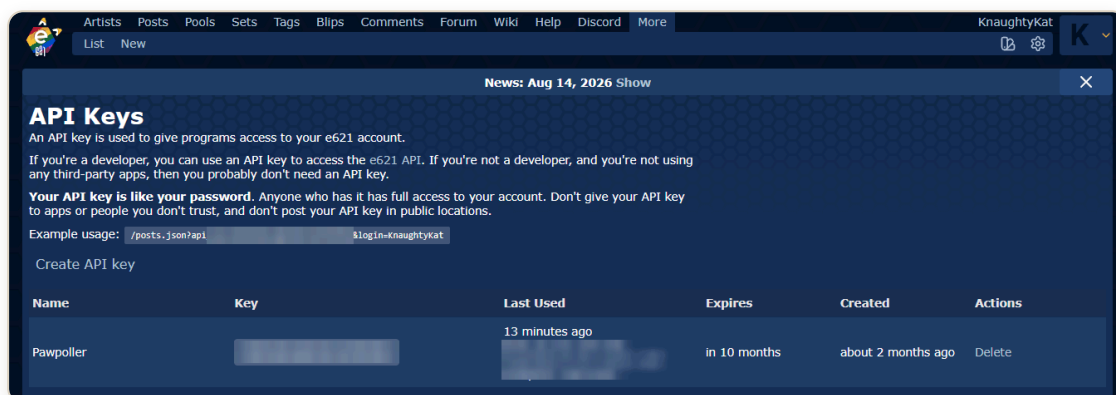

- 1 **Open your API keys page**
- Log in to e621, then open the account menu (your name, top right) → **Manage API Keys** (or go straight to e621.net/api_keys). e621.net ↗

The image shows a dark blue sign-in box with a hexagonal pattern. At the top, the word "Welcome" is written in large white letters. Below it are two white input fields: "Username" with the text "KnaughtyKat" and "Password" with masked characters. To the right of the password field is a "Remember me" toggle switch, which is currently turned on. Below these fields is a large orange "Sign in" button. Underneath the button are two links: "Forgot username?" and "Reset Password". At the bottom of the box is a large blue button that says "Create an account".

e621's Welcome sign-in box: Username, Password, Sign in

- 2 **Copy your API key**
- The page shows your **API key** — a long string tied to your account. This is **not** your login password.

The image shows a screenshot of the e621 API Keys page. The page has a dark blue header with navigation links: Artists, Posts, Pools, Sets, Tags, Blips, Comments, Forum, Wiki, Help, Discord, and More. The user's name "KnaughtyKat" is in the top right corner. The main content area is titled "API Keys" and contains a "News: Aug 14, 2026 Show" banner. Below the banner, there is a section titled "API Keys" with a warning: "An API key is used to give programs access to your e621 account. If you're a developer, you can use an API key to access the e621 API. If you're not a developer, and you're not using any third-party apps, then you probably don't need an API key. Your API key is like your password. Anyone who has it has full access to your account. Don't give your API key to apps or people you don't trust, and don't post your API key in public locations." Below this is an "Example usage:" section with a code snippet: `/posts.json?api=$login=knaughtykat`. At the bottom, there is a "Create API key" button and a table with the following columns: Name, Key, Last Used, Expires, Created, and Actions. The table contains one row for "Pawpoller" with a blurred key, "13 minutes ago" for last used, "in 10 months" for expires, "about 2 months ago" for created, and a "Delete" button for actions.

Name	Key	Last Used	Expires	Created	Actions
Pawpoller	[blurred]	13 minutes ago	in 10 months	about 2 months ago	Delete

e621's API Keys page: the key (blurred here) in the Name/Key table and in the example-usage string

3

Connect in PawPoller

Enter your e621 **username** and paste the **API key** in Settings.

WHERE IT GOES IN PAWPOLLER

Settings → e621 → Username + API key

KEEPING IT ALIVE

API keys don't expire. Only if you regenerate/revoke it on e621 — paste the new key back in.

GOOD TO KNOW

- Analytics read the engagement on posts you **uploaded** (tags `user:<you>`); posting uploads a Library piece with your tags, rating and source, and it goes through e621's moderation queue.
- e621 exposes no view count, so **score** (up-votes minus down-votes, which can go negative) is the headline metric alongside favorites and comments.
- Polling is gentle by design — e621's API asks for about one request per second, which PawPoller respects.
