WHAT YOU'LL NEED

- An AO3 account (username + password, OR a session cookie)

STEP BY STEP

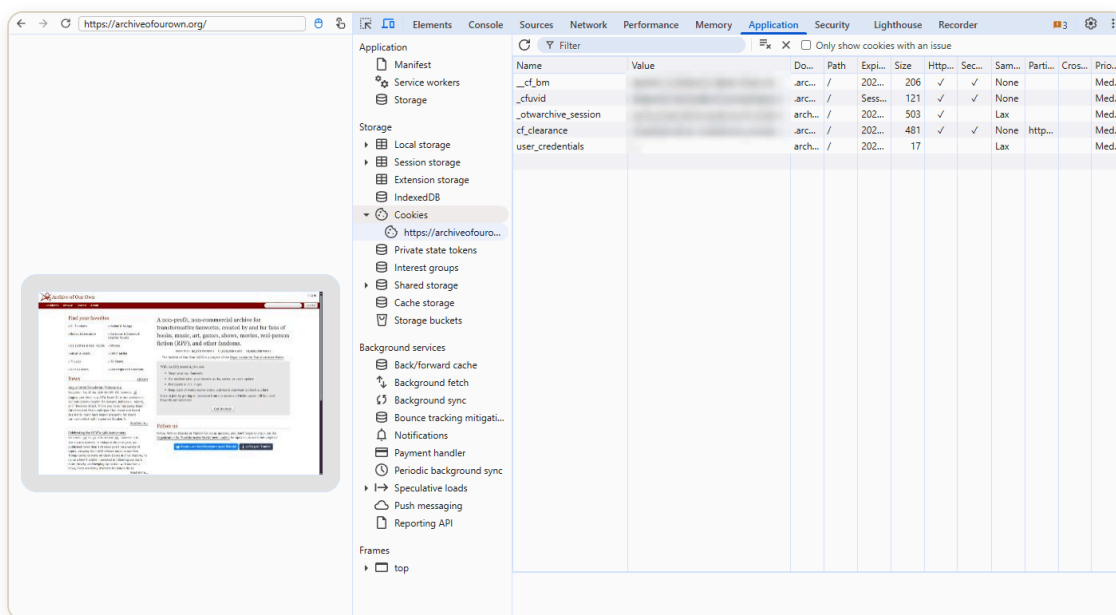

1 Choose how to log in

Easiest is your AO3 **username + password**. Alternatively you can paste the `_otwarchive_session` cookie.

AO3's Log in form with the username typed in

2 Or copy the session cookie

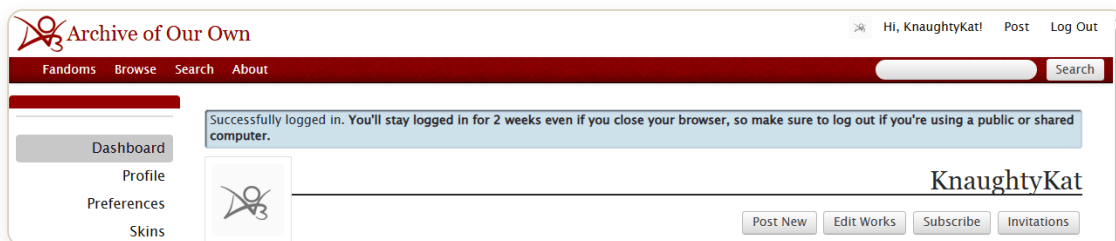

If you prefer the cookie: log in on a desktop browser, press **F12** → **Application** (Chrome/Edge) or **Storage** (Firefox) → **Cookies** → the AO3 site, and copy the value of `_otwarchive_session`.

AO3 with DevTools open on Application → Cookies, the `_otwarchive_session` row visible

3 Connect in PawPoller

Enter your username + password (or the session cookie) in the AO3 fields in Settings.

What a working login looks like on AO3: the Successfully logged in banner over your dashboard

WHERE IT GOES IN PAWPOLLER

Settings → AO3 → Username + Password (or session cookie)

KEEPING IT ALIVE

A session cookie expires; username + password re-logs in automatically. If you used the cookie method and it lapses, grab a fresh `_otwarchive_session` cookie, or switch to username + password.

GOOD TO KNOW

- AO3 throttles datacenter IPs hard, so bulk **imports run from the desktop** app. Ongoing polling still runs server-side.
