

Track score, favorites and comments on your e621 uploads.

Analytics + Posting

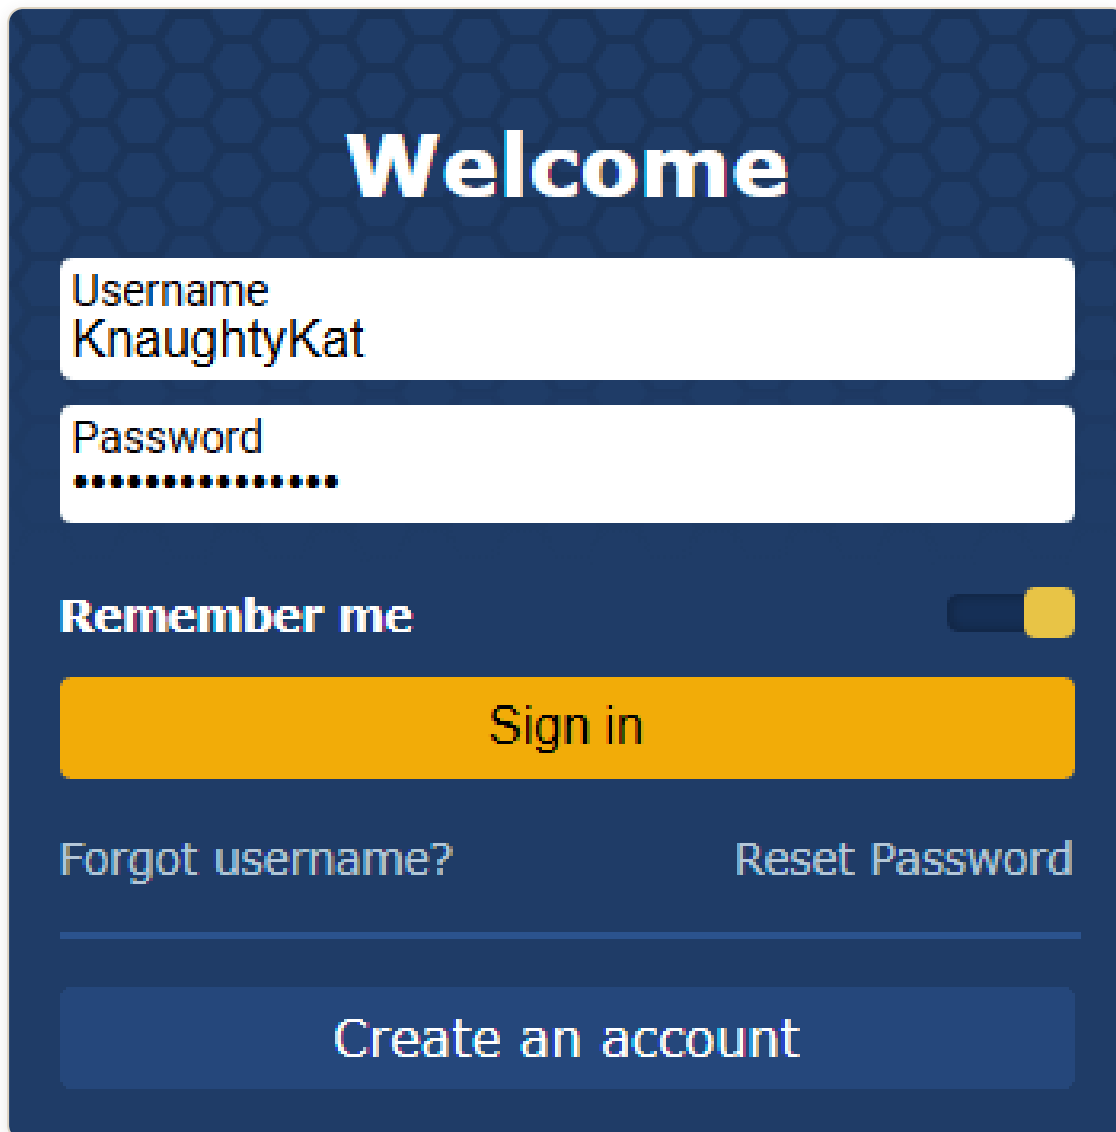

Easy Setup

WHAT YOU'LL NEED

- An e621 account
- An API key (not your password)

STEP BY STEP

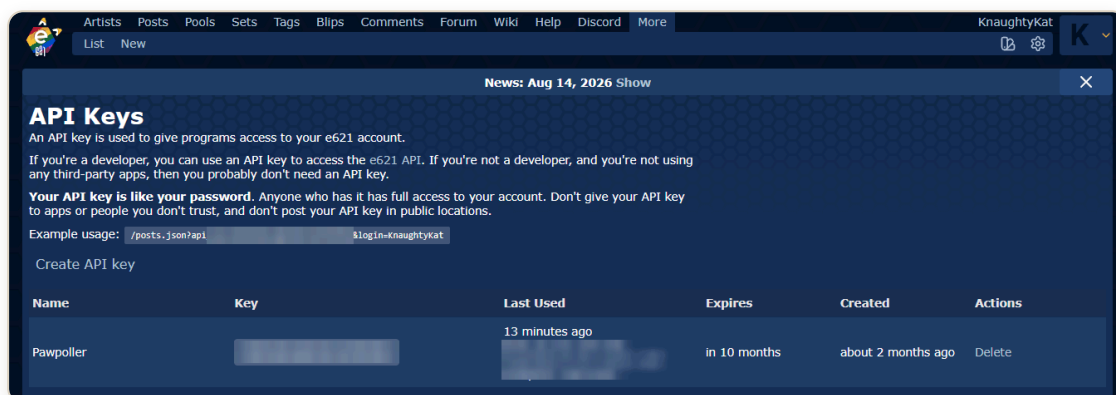

- 1 **Open your API keys page**
- Log in to e621, then open the account menu (your name, top right) → **Manage API Keys** (or go straight to e621.net/api_keys). e621.net ↗

The image shows a 'Welcome' sign-in box on a dark blue background with a hexagonal pattern. It contains two white input fields for 'Username' (with the text 'KnaughtyKat') and 'Password' (with masked dots). Below these is a 'Remember me' toggle switch that is turned on. A large orange 'Sign in' button is centered below the toggle. At the bottom, there are links for 'Forgot username?' and 'Reset Password', and a large blue 'Create an account' button.

e621's Welcome sign-in box: Username, Password, Sign in

- 2 **Copy your API key**
- The page shows your **API key** — a long string tied to your account. This is **not** your login password.

The image shows the 'API Keys' page on e621. It has a dark blue header with navigation links (Artists, Posts, Pools, Sets, Tags, Blips, Comments, Forum, Wiki, Help, Discord, More) and a user profile 'KnaughtyKat' in the top right. A 'News' banner for 'Aug 14, 2026' is visible. The main content area explains what an API key is and provides an example usage: `/posts.json?api=$login=knaughtykat`. Below this is a table with columns: Name, Key, Last Used, Expires, Created, and Actions. The table contains one entry for 'Pawpoller' with a blurred key and a 'Delete' action.

Name	Key	Last Used	Expires	Created	Actions
Pawpoller	[blurred]	13 minutes ago	in 10 months	about 2 months ago	Delete

e621's API Keys page: the key (blurred here) in the Name/Key table and in the example-usage string

3

Connect in PawPoller

Enter your e621 **username** and paste the **API key** in Settings.

WHERE IT GOES IN PAWPOLLER

Settings → e621 → Username + API key

KEEPING IT ALIVE

API keys don't expire. Only if you regenerate/revoke it on e621 — paste the new key back in.

GOOD TO KNOW

- Analytics read the engagement on posts you **uploaded** (tags `user:<you>`); posting uploads a Library piece with your tags, rating and source, and it goes through e621's moderation queue.
- e621 exposes no view count, so **score** (up-votes minus down-votes, which can go negative) is the headline metric alongside favorites and comments.
- Polling is gentle by design — e621's API asks for about one request per second, which PawPoller respects.
