WHAT YOU'LL NEED

- An AO3 account (username + password, OR a session cookie)

STEP BY STEP

1 Choose how to log in

Easiest is your AO3 **username + password**. Alternatively you can paste the `_otwarchive_session` cookie.

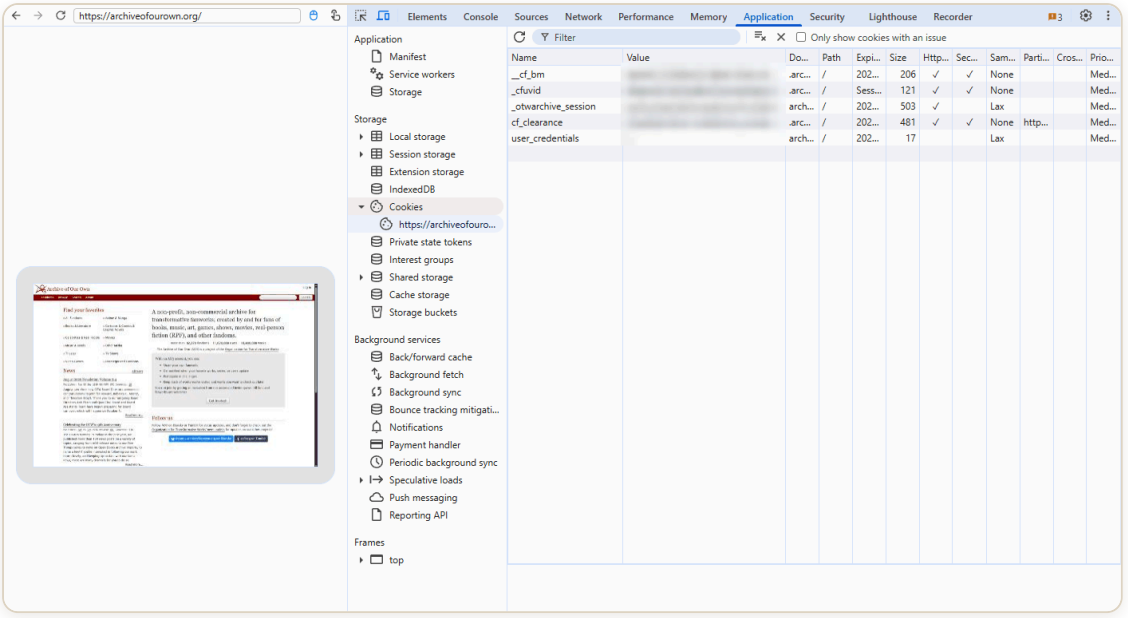

AO3's Log in form with the username typed in

2 Or log in with Remember me

If you prefer the cookie: log in to AO3 on a desktop browser with the **Remember me** box ticked.

3 Copy the two cookies

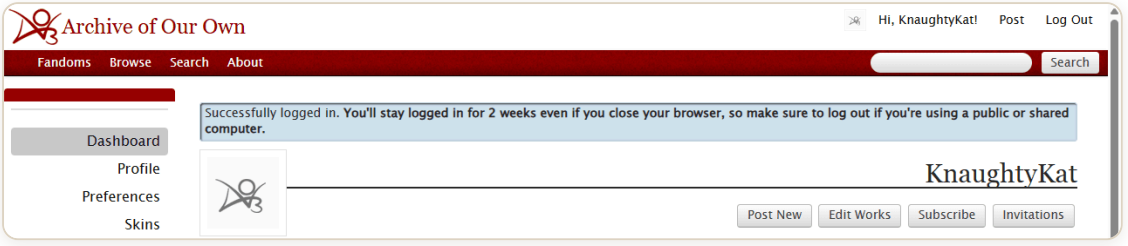

Press **F12** → **Application** (Chrome/Edge) or **Storage** (Firefox) → **Cookies** → the AO3 site. Copy the value of `_otwarchive_session`, then the value of `remember_user_token`.

AO3 with DevTools open on Application → Cookies, the _otwarchive_session row visible

4 Connect in PawPoller

Enter your username + password (or the two cookies) in the AO3 fields in Settings.

What a working login looks like on AO3: the Successfully logged in banner over your dashboard

WHERE IT GOES IN PAWPOLLER

Settings → AO3 → Username + Password (or the session and Remember me cookies)

KEEPING IT ALIVE

PawPoller keeps a cookie sign-in renewed each time it checks AO3. The Remember me cookie lasts three months from when you logged in. If AO3 ever shows as signed out, log in again with Remember me ticked and copy both cookies again, or switch to username + password.

GOOD TO KNOW

- AO3 throttles datacenter IPs hard, so bulk **imports run from the desktop** app. Ongoing polling still runs server-side.
