PAWPOLLER · GETTING STARTED GUIDE

e621

Track score, favorites and comments on your e621 uploads.

Analytics + Posting | Easy Setup

Open this guide as a PDF ↗

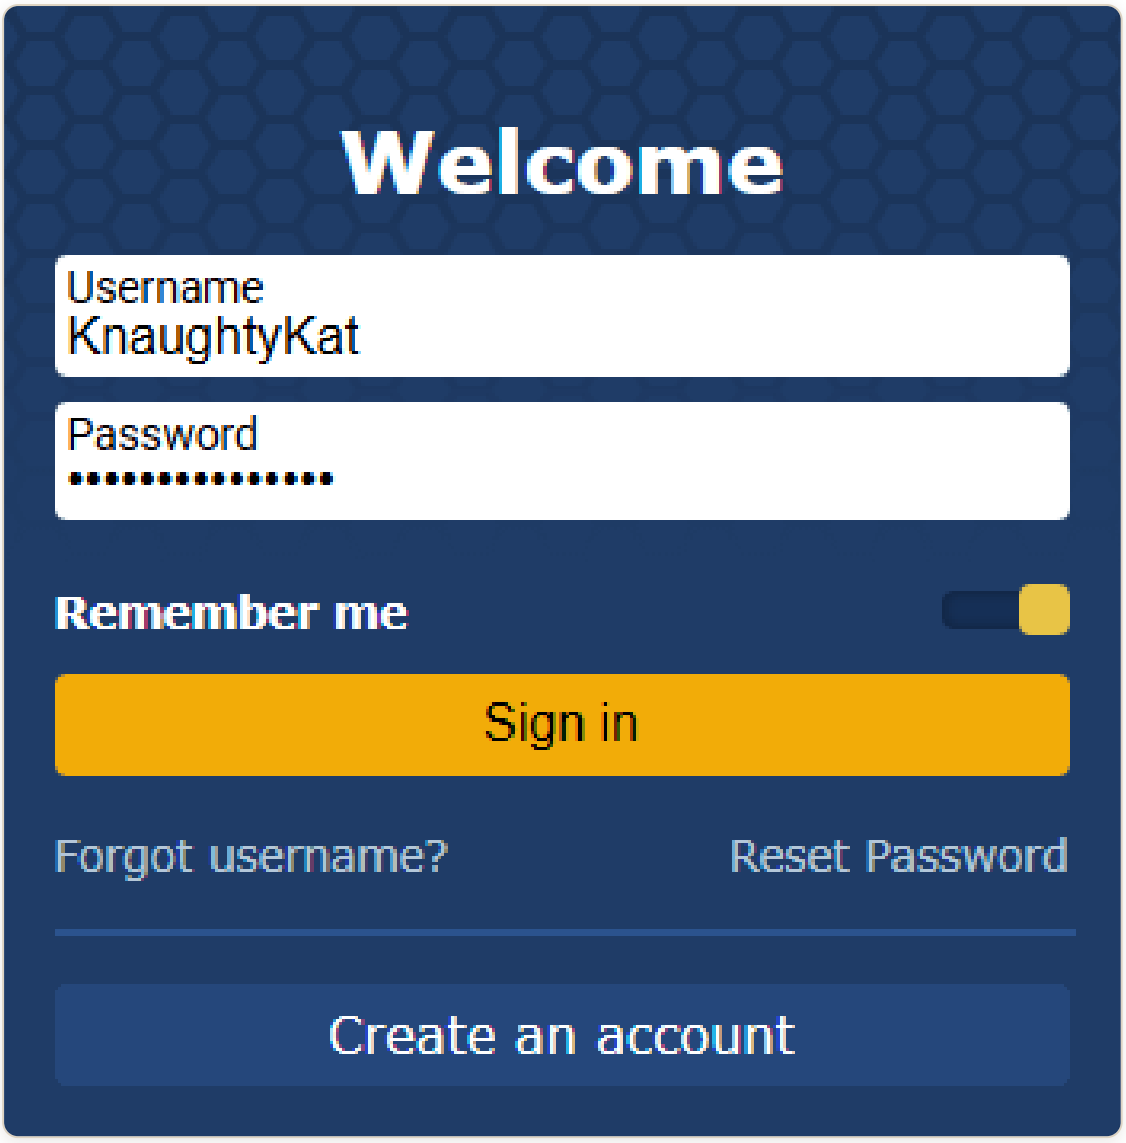

WHAT YOU'LL NEED

- An e621 account
- An API key (not your password)

STEP BY STEP

1 Open your API keys page

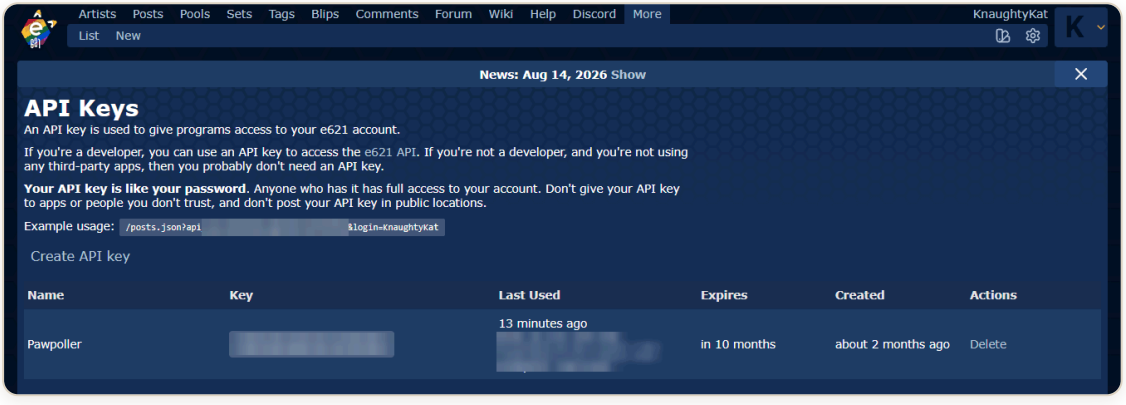

Log in to e621, then open the account menu (your name, top right) → **Manage API Keys** (or go straight to e621.net/api_keys). e621.net ↗

e621's Welcome sign-in box: Username, Password, Sign in

2 Copy your API key

The page shows your **API key** — a long string tied to your account. This is **not** your login password.

e621's API Keys page: the key (blurred here) in the Name/Key table and in the example-usage string

3 Connect in PawPoller

Enter your e621 **username** and paste the **API key** in Settings.

WHERE IT GOES IN PAWPOLLER

Settings → e621 → Username + API key

KEEPING IT ALIVE

API keys don't expire. Only if you regenerate/revoke it on e621 — paste the new key back in.

GOOD TO KNOW

- Analytics read the engagement on posts you **uploaded** (tags `user:<you>`); posting uploads a Library piece with your tags, rating and source, and it goes through e621's moderation queue.
- e621 exposes no view count, so **score** (up-votes minus down-votes, which can go negative) is the headline metric alongside favorites and comments.
- Polling is gentle by design — e621's API asks for about one request per second, which PawPoller respects.
