WHAT YOU'LL NEED

- A FurryNetwork account
- A desktop browser with DevTools (F12)

STEP BY STEP

1 Log in on the website

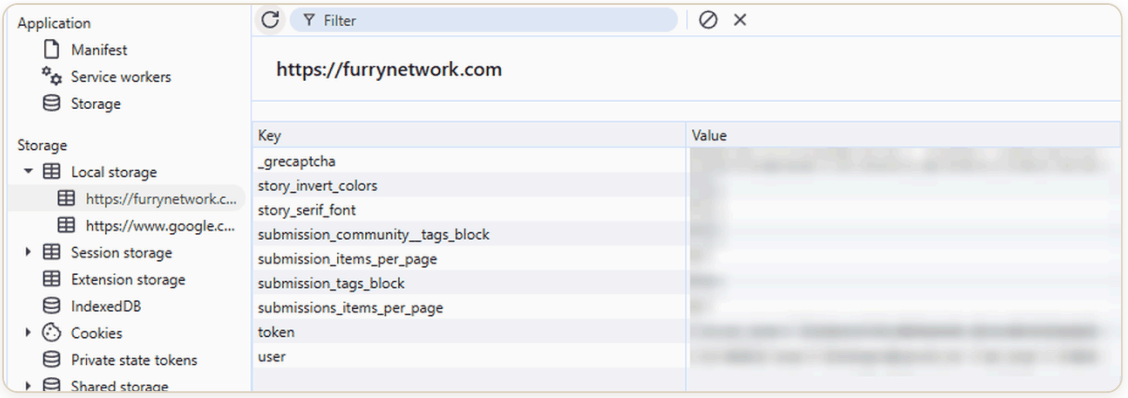

Sign in at furrynetwork.com in your browser. The real page solves the reCAPTCHA that stops any app from logging in with a password. furrynetwork.com ↗

FurryNetwork's Log in page: Email, Password, reCAPTCHA notice, LOG IN

2 Find your refresh token

Press **F12** → **Application** (Chrome/Edge) or **Storage** (Firefox) → **Local Storage** → furrynetwork.com. FurryNetwork stores your login under the `token` key as `{"access_token":…,"refresh_token":…}` — click it and copy the `refresh_token` value. (Or: the **Network** tab → the `oauth/token` response.)

FurryNetwork with DevTools open on Application → Local Storage → furrynetwork.com, the token and user keys named, their values blurred here

3 Connect in PawPoller

Paste the refresh token in Settings. The email is optional — only a label if the token carries no name.

WHERE IT GOES IN PAWPOLLER

Settings → Platforms → FurryNetwork → Refresh token

KEEPING IT ALIVE

Only if the token is revoked (a password change, or "log out everywhere"). PawPoller renews the token itself on every poll; paste a fresh one from Local Storage if polling stops.

GOOD TO KNOW

- Email + password sign-in is **gone**: FurryNetwork put its login behind a reCAPTCHA no app can pass, so the token is the only way in.
- Work is grouped by **character**; PawPoller polls and posts across all of yours.
