PAWPOLLER · GETTING STARTED GUIDE

Moving to a hosted seat

Send your whole library, history and site logins straight into your hosted seat with a one-time code.

Moving Your PawPoller | Easy Setup

Open this guide as a PDF ↗

WHAT YOU'LL NEED

- Your old PawPoller, updated to the latest version
- Your hosted seat, signed in
- Both open at once: on two screens, or two tabs

STEP BY STEP

1. **Open Settings on your hosted seat**
   Sign in to your hosted seat, open **Settings** and go to **Moving to another PawPoller**.

2. **Show a code**
   Under **Receive a move**, press **Show a code**. A code like `yourseat-7KQ4-M9ZD-2HPX` appears. It works once, for 30 minutes.

3. **Open Settings on your old PawPoller**
   On the PawPoller you've been using, open **Settings** and go to **Moving to another PawPoller**.

4. **Type the code**
   Under **Send to my hosted seat**, type the code and press **Next**. Capitals, spaces and dashes don't matter.

5. **Check the address**
   PawPoller shows your seat's address and asks **Is this your seat?** If it is, press **Yes, send it**.

6. **Wait for the send**
   A bar shows the progress. A big library can take a while on home internet. If your internet drops, it carries on by itself; if PawPoller was closed, press **Carry on sending**.

7. **See the old copy pause**
   A banner says **This copy of PawPoller has moved and is paused**. It stops checking your sites and posting, so the two copies don't trip over each other. Nothing is deleted.

8 Bring it in on your seat

Back on your seat, **Receive a move** says your old PawPoller has arrived. Press **Bring it in**, read what's in it, and press **OK**. Your seat keeps its own password and email.

9 Sign in again

Your seat restarts by itself, which takes about a minute. Sign in with your **seat's** password. Your library, history and site logins are all there.

10 Check your sites

Open **Accounts** and press **Test** on each account. A ✓ means it's ready. If one says its cookies or login have expired, copy fresh ones into that account's **Credentials** (each site's guide shows how). **DeviantArt** needs two extra things on a new address: add your seat's address to your DeviantArt app (see the DeviantArt guide, step 6), then press **Authorise posting** again; and to change descriptions, paste a `da_cookie` (the DeviantArt guide shows how).

WHERE IT GOES IN PAWPOLLER

Nothing to paste: everything happens in **Settings** → **Moving to another PawPoller**, on both PawPollers.

KEEPING IT ALIVE

Nothing to keep alive. A move is done once. If you change your mind, press **Resume this copy** on the old PawPoller's banner.

GOOD TO KNOW

- The code never travels: both PawPollers turn it into keys, and everything on the way is locked with them.
- Typed a wrong code too many times? The code is cancelled for 15 minutes. Then show a new one.
- **If sending doesn't work** (or you're moving to a computer, not a seat): on your old PawPoller, choose a moving phrase and press **Make moving file**. On the new one, under **Bring in my old PawPoller**, pick the file, type the phrase and press **Bring it in**. Delete the file afterwards: your library is unencrypted in it (your logins are locked).
- Your sign-in doesn't move: the new PawPoller keeps its own username, password, email and two-step code.
- A link between your desktop app and a server doesn't move either. Connect them again afterwards if you use one.
- If the new PawPoller already had work in it, its records are replaced by the move's. A safety copy is kept first, and artwork is never deleted.
