WHAT YOU'LL NEED

- A Pixiv account
- A refresh token from a browser login

STEP BY STEP

1 Get a refresh token

Pixiv has no simple token page — use a helper like `gppt` (`pip install gppt`) or a browser-based pixiv-token tool. It walks you through a Pixiv login and captures a **refresh token**.

pixiv's login page — the helper tool drives this same login and captures the refresh token

2 **Copy the refresh token**

The long string the tool prints after you log in.

3 **Connect in PawPoller**

Paste the refresh token (and optionally your user id) in Settings.

WHERE IT GOES IN PAWPOLLER

Settings → Pixiv → Refresh token (+ user id)

KEEPING IT ALIVE

Refresh tokens are long-lived and rotate automatically — PawPoller stores the rotated one. Only if it's revoked: run the token helper again to get a fresh refresh token.

GOOD TO KNOW

- This uses Pixiv's app API, so it polls gently to respect rate limits.
