PAWPOLLER · GETTING STARTED GUIDE

SoFurry

Track your SoFurry stats and post there through the official API.

Analytics + Posting | Easy Setup

Open this guide as a PDF ↗

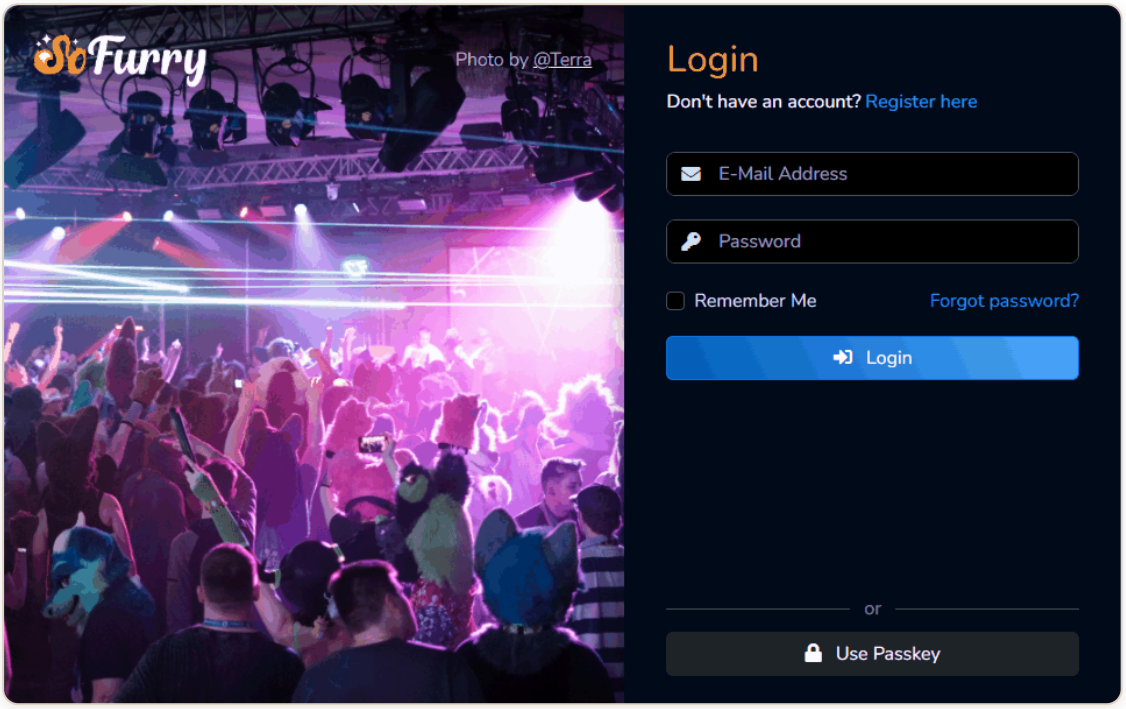

WHAT YOU'LL NEED

- A SoFurry account
- A Personal Access Token from Settings → Developer

STEP BY STEP

1 Log into SoFurry

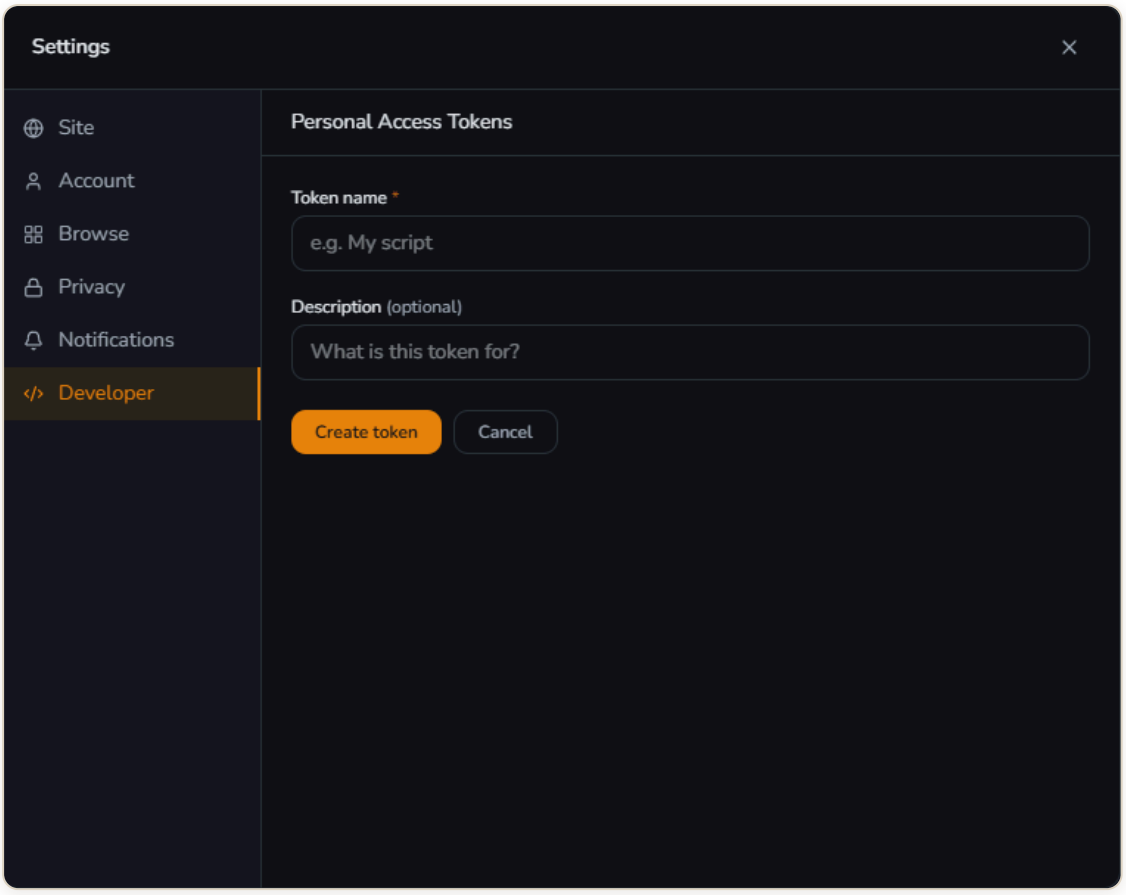

Sign in at sofurry.com with your e-mail address and password (or a passkey). Two-factor accounts are fine — the token never logs in. **sofurry.com/login ↗**

SoFurry's Login panel: e-mail address, password, Login, or Use Passkey

2 Create a Personal Access Token

Open **Settings** → **Developer** → **Personal Access Tokens**, name the token "PawPoller" and press **Create token**. Copy the token it shows — SoFurry only shows it once. sofurry.com/settings/pat-create ↗

SoFurry Settings, the Developer tab: Personal Access Tokens with Token name, Description and Create token

3 Connect in PawPoller

Paste the token in the SoFurry field in Settings and Save. Your profile name is read from the token — there is no username or password field any more.

WHERE IT GOES IN PAWPOLLER

Settings → SoFurry → Personal Access Token

KEEPING IT ALIVE

Only if you revoke the token on SoFurry. Create a new token under Settings → Developer and paste it.

GOOD TO KNOW

- PawPoller no longer stores a SoFurry password — the official API replaced the old website login.
- On the server SoFurry calls go through the CF proxy (its datacenter IP is blocked otherwise).
