PAWPOLLER · GETTING STARTED GUIDE

Tumblr

Post your art, GIFs and video to Tumblr, and track each post's notes.

Analytics + Posting | Medium Setup

Open this guide as a PDF ↗

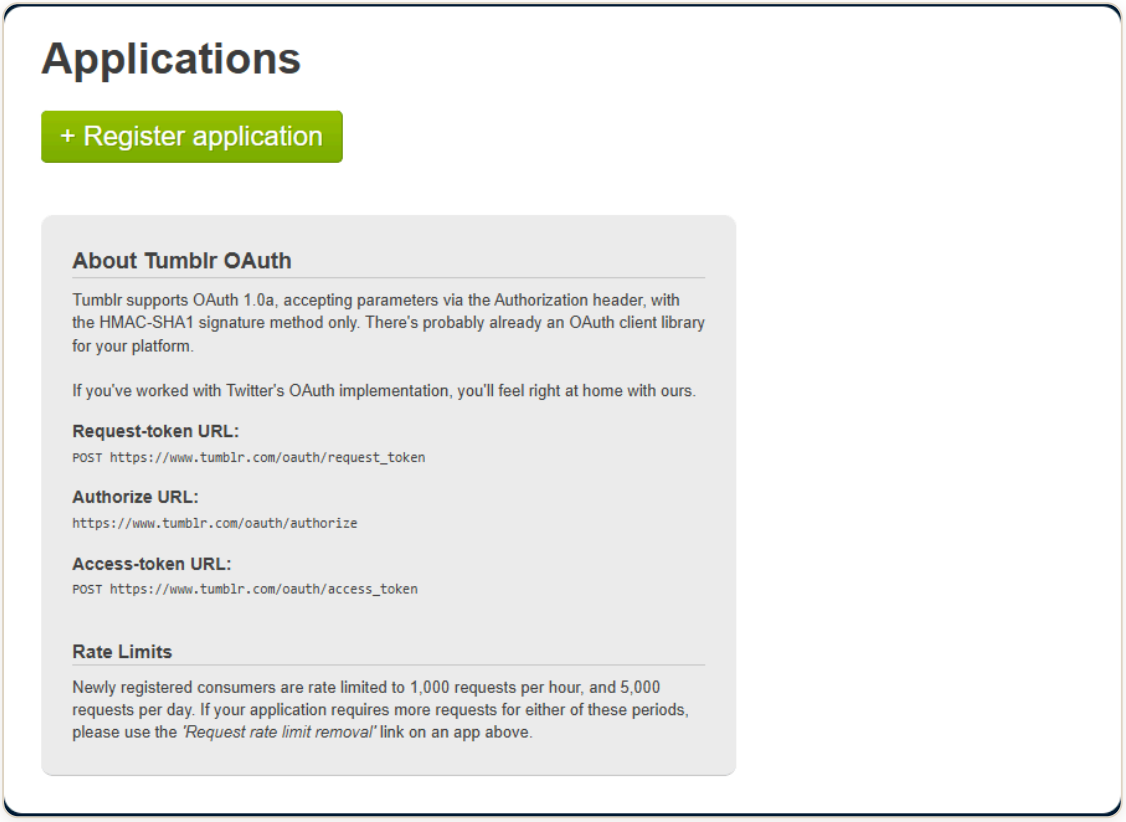

WHAT YOU'LL NEED

- A Tumblr blog you own
- A free Tumblr app (made in step 1 — about 5 minutes)
- A computer, not a phone, for the app steps

STEP BY STEP

1 Register a Tumblr app

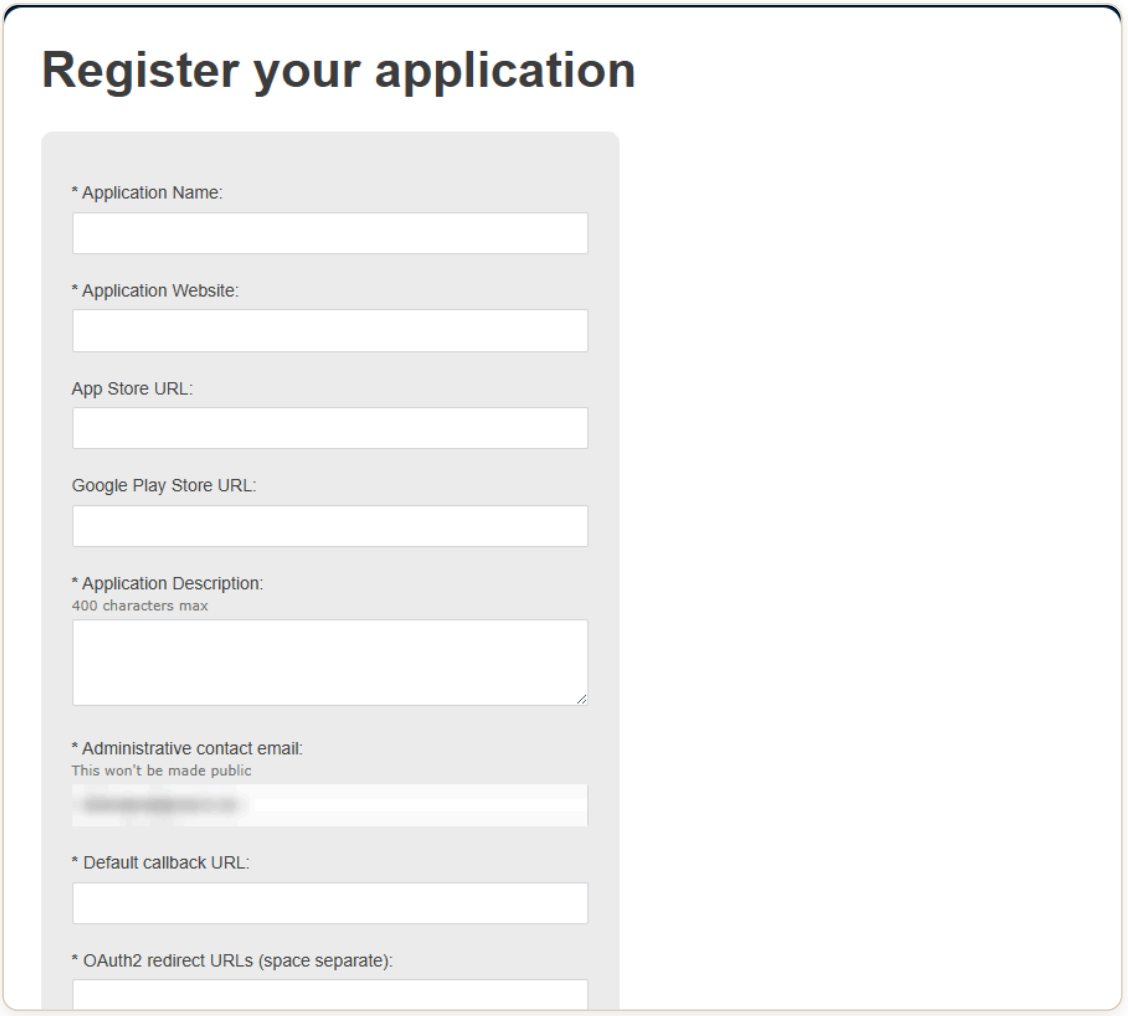

Open the Tumblr apps page (logged in as the blog's owner) and press **Register application**. Tumblr OAuth apps ↗

Tumblr's Applications page with the Register application button

2 Fill in the form

Give the app any name and description, your blog's address as the website, and `https://pawpoller.com` as the default callback URL. Leave **OAuth2 redirect URLs** for now (step 7 fills it), tick the box, and press **Register**.

Register your application: name, website, description, contact e-mail (blurred here), callback URL

---

3 Copy the key and the secret

Your new app shows an **OAuth Consumer Key** and, under **Show secret key**, an **OAuth Consumer Secret**. Copy both.

---

4 Add Tumblr in PawPoller

Go to **Settings** → **Platforms** → **Tumblr**. Type your blog's name (for example `myblog`) and paste the **OAuth Consumer Key**. Press **Connect**. You'll see **Connected — tracking** and your blog: PawPoller now tracks your notes.

---

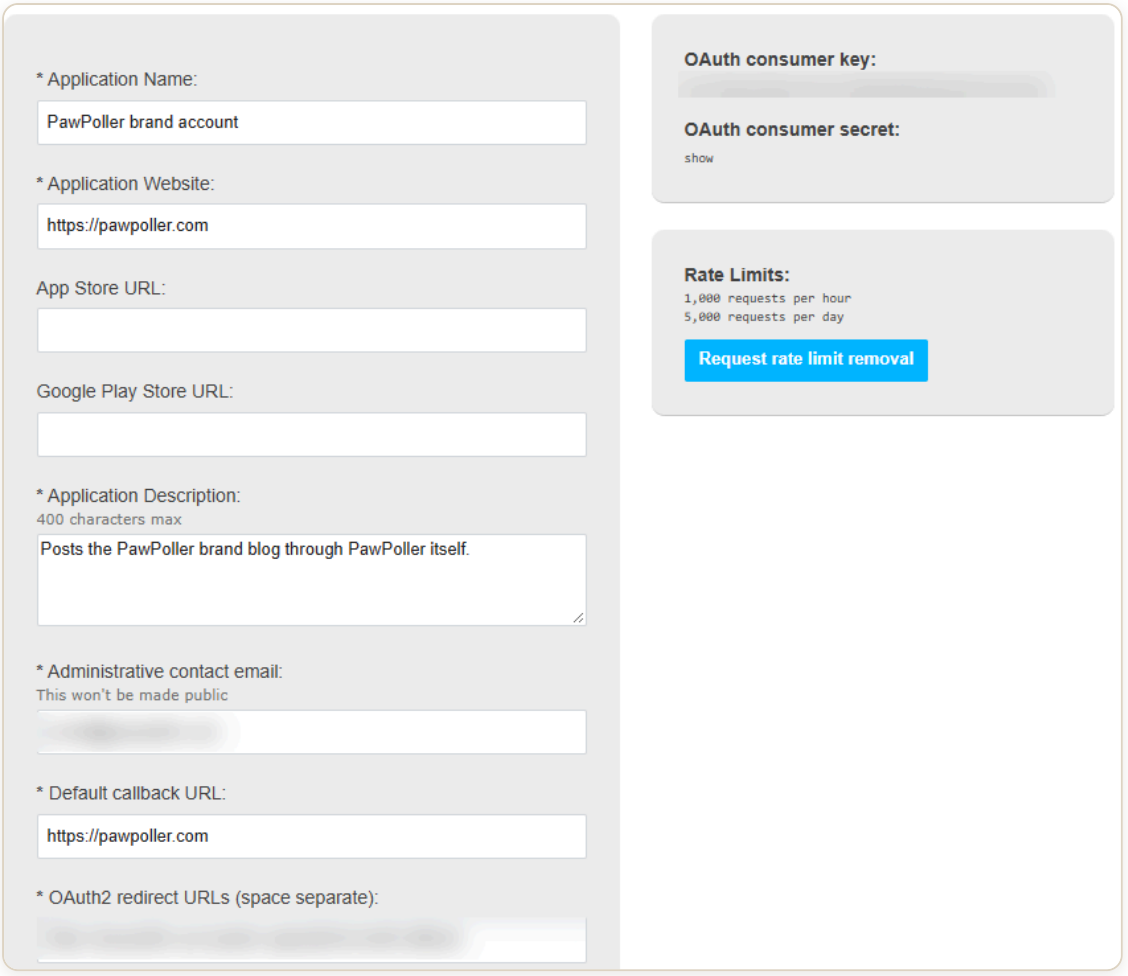

5 Paste the secret and press Connect for posting

In the same card, under **Posting to Tumblr**, paste the **OAuth Consumer Secret** and press **Connect for posting**. PawPoller shows a **return address** ending in `/api/tum/auth/callback`, and a Tumblr tab opens.

---

6 If Tumblr says the address isn't allowed

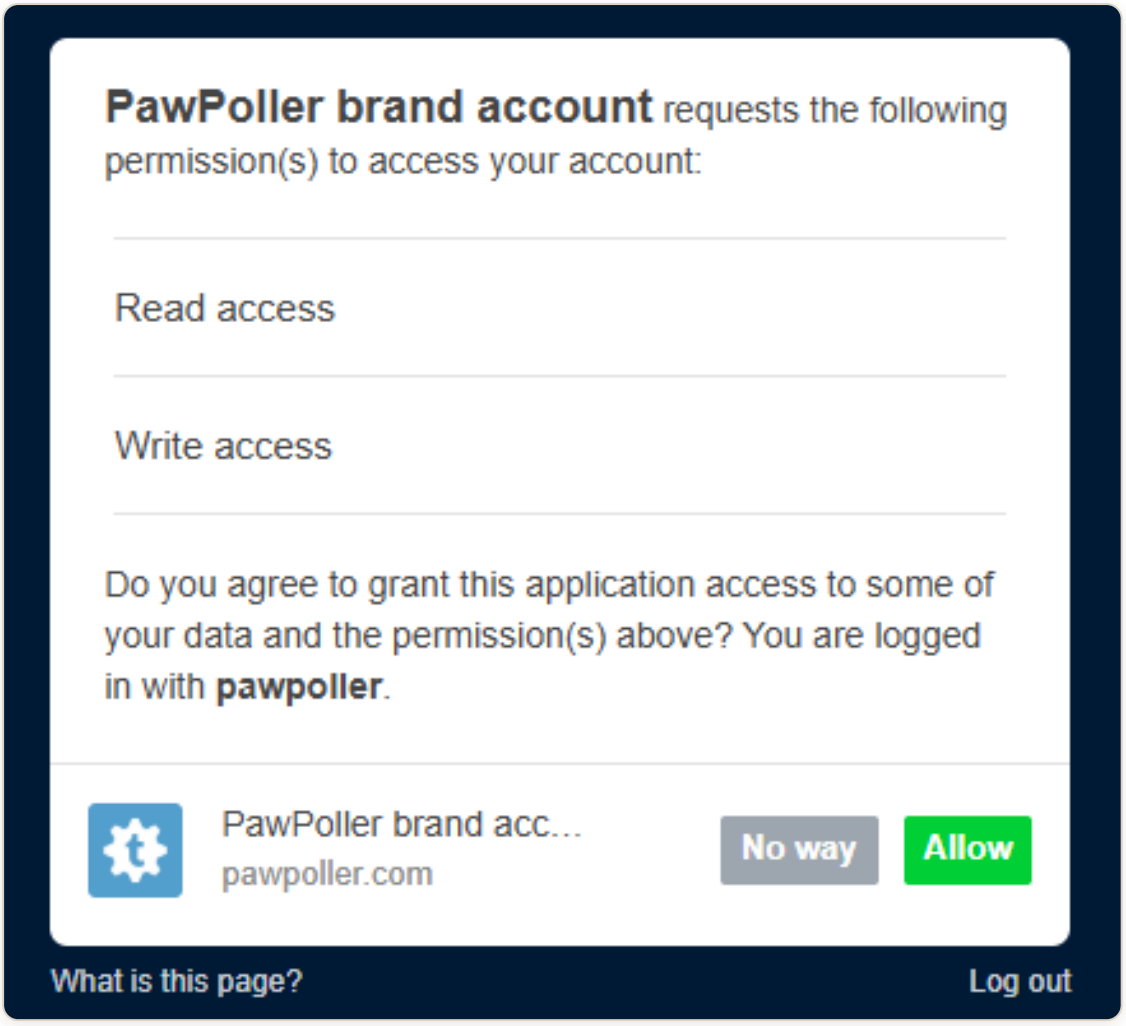

Copy the return address PawPoller showed. Back on the Tumblr apps page, open your app's settings (the gear), add it to **OAuth2 redirect URLs** (that box takes several, separated by spaces, so keep anything already there), and press **Save changes**. You only do this once.

Edit your application: the OAuth2 redirect URLs box at the bottom (the address and the key are blurred here)

7 Approve PawPoller

Press **Connect for posting** again. On Tumblr, check you're logged in as the blog's owner and press **Allow**. The tab says **Tumblr connected — Connected as** you **· posts to** your blog. Close it; PawPoller renews the sign-in by itself from here.

Tumblr asks to grant the app read and write access, showing which blog you are logged in with, and the Allow button

8 Post something

Publish a piece and tick **Tumblr**. It appears on your blog with its picture, title, caption and tags. Posts from the **Posts** page take their pictures to Tumblr too.

WHERE IT GOES IN PAWPOLLER

Settings → Platforms → Tumblr → blog + OAuth Consumer Key (Connect), then the Consumer Secret and Connect for posting

KEEPING IT ALIVE

Nothing to renew by hand. PawPoller renews the Tumblr sign-in itself. If you change your Tumblr password or remove the app's access, press **Connect for posting** again.

GOOD TO KNOW

- **Ratings.** Tumblr takes General and Mature work. **Adult** (explicit) work is greyed out — Tumblr bans it.

- **Mature work waits as a draft.** Tumblr doesn't let apps set its Mature label yet, so PawPoller saves a Mature piece as a **draft** and the result and the bell link to it. Open it on Tumblr, add the Mature label (and its categories) and publish. PawPoller asks for the label anyway and publishes by itself the day Tumblr starts keeping it.
- Sizes: pictures up to 20 MB, GIFs up to 10 MB, video up to 500 MB. A file that's too big greys Tumblr out before anything uploads. Music can't go to Tumblr from an app (Tumblr refuses audio uploads), so audio pieces are greyed out.
- Tumblr's daily limits: 250 posts, 250 pictures, 20 videos (60 minutes). Past one, PawPoller says "try again tomorrow" instead of retrying.
- Fixing a piece (caption, tags, rating) updates the Tumblr post in place and keeps its picture.
- Set up Tumblr before 4.60 with the four pasted values? They keep working. **Connect for posting** replaces them.
- Tumblr reports one "notes" number per post (likes + reblogs + replies combined).
